Byte addrescability :-

There are three basic information quantity.

1. Bit
2. Byte
3. Word

It is inpratical to assign distint address to indivisual bit in the memory, so sucessive address, refers to Sucssève bytes location in the memory and this assignment is called byte addresible memory.

eg :- If the word length is 'g' and the Machine is 32-bits. So, the sucssive address will be located at the address like 0, 2, 4, ..., 32

With each word consisting of ~~4~~-bits

Word :-

It is a group of cells or group of fixed size which are pre process are called as word.

No. of bits on each word is called word length.

The word length will be ranging from 16 - 64 bits
