It is a general purpose, high level programming language.
It is also called dynamic programming language.

Features :-

- Simple and easy to learn
- Platform independent
- Free and open source
- Rich library support
- Portable
- Robust
- Embeddable and Extensible

Use of python :-

- Web framework and application.
- GUI based desktop application
- Graphical design.
- Image processing application
- AI / Neural Network
- IOT and Data Science
- Game applications.

History of Naming Python :-
