

The name was derived from Monty Python flying circus. A famous was being broadcasted by BBC in 1969. The python 2.0 was released in the year 2000 and python 3.0 was released in the year 2008.

Official date of birth is 10th february 1991.  
Currently we used the version of python is python - 3.9.5

## Comparison b/w C and python

C is PP  $\rightarrow$  procedure oriented programming, python is OOP

C is low level lang, python is high-level

C has a strict data type order, python does not have strict type.

C

python

Developed by Dennis Ritchie in Bell Lab in 1972

Developed by Guido van Rossum C.W.I in 1991

It is a procedure oriented programming language

① Python is OOP

It does not contain the feature of class, object inheritance etc

python contains

In C data type declaration is compulsory

In python it is not compulsory

It supports single and multidimensional array

It supports only single dimensional array but a third party library is used for multi-dimensional array called NumPy
