

Complex

A complex number is represented by a complex class

It is specified as a combination of a real part and imaginary part

Sequence Data Type

It is the ordered collection of similar or different python data types

It allows storing of multiple values in an organised and efficient fashion

Types -

String

A string is a collection of one or more characters but in a single quote, double quote or triple quote

In python there is no character data types

Example :- `a = 'ABC'`

List

list are just like arrays declared in other languages which is an ordered collection of data

It is very flexible as the items in a list don't need to be of the same type.
