

Write 4 characteristics of list.
Transversing of list can be done how many ways give the example of each.

Write a string message in string message format
- "Nobody is perfect in this world".
do the following operation.

5) print message of $[-15, -14, -1]$

print message $[-]$

(11) print message $[:]$

(11) print message $[...-1]$

(12) print message $[2000:5:-2]$

(12) print message $[100:23:4]$

list ^{aliasing} ~~aliasing~~ and cloning

Copy of list can be done in 2 ways that is aliasing and cloning

Aliasing is nothing but just giving a name to the list where cloning is the process of creating exactly duplicate independent object.

$x = [10, 20, 30, 40]$

$y = x$ (here x list is not copied rather at y has another name "y") This is a aliasing
