

Abiotic Component: An the non living organism or Components like water, air, land and etc are abiotic Component

Biotic Component:- All the human beings, plants, animals, microorganism. (living organism) are biotic component.

Environment has four segments

- (1) Atmosphere
- (2) Hydrosphere
- (3) Lithosphere
- (4) Biosphere

Atmosphere: It is a thin or thick layers of gases

surrounding the Earth and are highly compressible.

It absorbs most of the Cosmic rays including UV, IR, radiation that comes from Sun while filtering out harmful radiation below 300nm.

The total mass of atmosphere is equal to 1 million of Earth's mass

It is a protecting layer

Abiotic Component: An the non living organism or Components like water, air, land and etc are abiotic Component.
