

Ionosphere present in this layer from (100 to 400 or 50 km).

It ionise most of the molecules by radio wave that comes from Sun.

X-Ray and UV-light absorbs most of the heat coming from Sun that increases the temperature.

Satellites and Space Shuttle are operating in this layer.

Exosphere :-

600 km to upto Space

Ultimately temperature increases due to nearest to Sun.

The highest temperature of atmosphere that is 2000°C is found here due to X-Ray and UV-Ray.

Hydrosphere

It includes all the water on Earth.

It contains $\frac{3}{4}$ of Earth's surface for it looks like blue colour from space and it is called blue planet.
