

Structure of Hydrosphere

97% Ocean Water
Fresh Water - 3%

Lithosphere

The term lithosphere comes from a Greek word lithos which means land or soil.

The lithosphere contains mostly rocks and essential minerals.

The interior of Earth is divided into mostly into three parts on the basis of chemical composition of elements.

Crust :-

It is the top layer of Earth's

The oceanic crust is thinner and ~~com to~~ to the land crust.

The depth of crust is 60 km

It contains Silicon and Aluminium.

It is also known as Si-Al layer.

Mantle : The second interior of the Earth layer is mantle and its depth is upto 2900 km and the main composition of this layer are
