

Ecology :- The term ecology was first introduced by Ernst Haeckel

The term ecology is made up of two words one is 'Oikos' means 'logos' means to study. It is the branch of Science. The study about relationship b/w living organism with their habitats.

Ecology is subdivided into two parts :-

Autecology & Synecology

Autecology is related to study about individual organism

Synecology is related to study about Community of Organism

Levels of ecology

It includes species or organism

Population → group of individual organism

Community → When different population are gathered

Biomes → Ecosystem
