

Syntax to declare Variable name in python

Variable name = Value

Eg → num1 = 30

Note: Value is mandatory to otherwise it will give error.

Syntax of print()

print (object^{→ sum}1, object^{→ num 2}2)

End = '\n'

Separator = " "

Object refers to any Variable or Constant you want to print
Each object will be separated by Comma in print statement

End = '\n' → It decides the position of the cursor after executing the print statement

The default Value is new-line
