

Similarly Octal number are written by prefixing
00 or 00
 ↓ ↓
 2080 4096

eg → 00153 or 00153

Converting Datatypes Explicitly

Depending On the type of data python internally assumes the data type for the variable but sometimes programmer wants to convert one datatype into another type. this is called type conversion.

This is possible by mentioning the datatype with
().

eg → `20 = 15.56`
 `int(x)`
 `Print(x)`

WAP to convert numbers from Octal, binary and hexadecimal system into decimal number system.
