

Head Section:

(1) `<title> . . . </title>` - 256 char, acc. 350
best is 25 char . . . is considered

`<head>`

`<title> my page </title>`

`</head>`

`[ my webpage . . . ]` - this is called ellipse.

2) `<link>`, It is a unpaired tag

⇒ It has self closing tag `</link>`

eg :- `<link href = " Path of res."`

res = "the ref. to html-doc."

`type = "type of source"`

for icon:

`<link res = icon, href = "img .PNG:"`

`type = "Image/ico"`

for globalised path need to be
define the add.

local

file : `//C :- // user / public / myz / html . PNG`
