

Features of Python

- Less code
- dynamic typed language
- Interpreted language
- Very rich in library
- most suitable for AI & data science applications

Python character set

It contains all characters of ASCII & unique characters.

'A'-'Z' → 65-90

'a'-'z' → 97-122

'0'-'9' → 48-57

ASCII is a subset of UNICODE

Python token

The smallest individual element of a python statement.

i) Keywords - Reserved word having special meaning to python
Ex: class, finally, if, else, true, false etc

ii) Identifiers - User defined symbolic names used to identify variable, class, function, modules etc.
