

→ All characters are indexed based on their position.
(both +ve & -ve index)

ii) Tuple:-

- It is a sequence of values separated by comma (,) and enclosed within a pair {}.
- It may contain heterogeneous values and other tuple also.
- All elements are indexed based on their position.

Ex:-

$t = (5, 7, 3, 2, 9)$

$t_2 = (5, 3, (7, 3, 2), (8, 1))$

$t_3 = 7.5, 'A' (5, 4, 3)$

Accessing element of a tuple:-

$t = (3, 4, 7, 9, 8, 10)$

for n in t ;

print(n)
