

NOT:-

It reverse the value of an operand

not true = False

not 0 = 1

not 10 = 0

not [] = 1 (true)

not [1, 2, 3] = 0 (false)

Identity operator:- (is, is not)

Identity operator is used to check whether the memory location of 2 operands are same or not.

OR

5 OR 0 : o/p = 5

5 OR 7 : o/p = 5

0 OR 5 : o/p = 5

"abc" OR "xyz" o/p = "abc"

[1, 2, 3] OR [] = [1, 2, 3]

AND :-

→ The and operator working in numbers, string list and tuple return first false (second true)

[2, 5, 7] AND [] = []

5 AND 0 = 0

0 AND 0 = 0

"abc" AND "def" = "def"

5 AND 10 = 10

NOT :-

It reverse the value of an operand

not true = false

not 0 = 1

not 10 = 0

not [] = 1 (true)

not [1, 2, 3] = 0 (false)

Identity operator :- (is, is not)

Identity operator is used to check whether the memory location of 2 operands are same or not.
