

Electric bill calculation

```
n = int(input("Enter no. of units: "))  
if n <= 100:  
    bill = 4.50 * n  
elif n <= 300:  
    bill = 4.50 * 100 + 5.50 * (n - 100)  
elif n <= 500:  
    bill = 4.50 * 100 + 5.50 * 300 + 7.50 * (n - 300)  
else:  
    bill = 4.50 * 100 + 5.50 * 200 + 7.50 * 200 +  
        10.0 * (n - 500)  
print("bill amount = ", bill)
```

LOOP/Iteration/Repetition control

Repetition of a set of statement for multiple times is referred to as looping.

Two loop structures used in Python

1. While loop

2. For loop
