

Prime number using break

```
n = int(input("Enter a number:"))
```

```
flag = True
```

```
for i in range(2, n//2 + 1):
```

```
    if n % i == 0:
```

```
        flag = False
```

```
        break
```

```
if flag:
```

```
    print("It is a prime no")
```

```
else:
```

```
    print("It is not a prime number")
```

Continue

It is used to skip part of a loop and begins the next iteration.

→ It abandons the present iteration and resumes the next iteration.

→ It is known as backward jumping

```
for n in range(3, 20, 2):
```

```
    if n % 3 == 0:
```

```
        continue
```

```
    print(n, end=" ")
```
