

S = "CSE-AI ML"

print(S.partition('e'))
("CSE-AI ML", "e", "")

join(Iterable Sequence) - The invoking string is inserted between every two elements of the iterable sequence.

S = "* * *

Print(S.join("ATA"))

G * * * I * * * T * * * A

Print("*".join([10, 20, 30, 40])) 10*20*30*40

replace(string1, string2):-

It returns a string by replacing every occurrence of string1 by string2.

Ex:-

S = "MISSISSIPPI"

print(S.replace('S', 'x')) MIxxAIxxI PAT

S = S.replace('S', 'x')

~~startswith~~

startswith (Substring):- It returns true if a string begins with a specified substring.

Names = ["SRISKANT", "SOURAV", "SRIMAN", "SRUTT",
"DENESH", "DEBKA", "SRISAY"]
