

List operators:-

1) membership operator 'in' and 'not in'

Ex $L = [1, 3, 5, 7, 9]$

for n in L :

Print(n)

2) Concatenation operator (+)

Ex

$L1 = [1, 3, 5, 7, 9]$

$L2 = [2, 4, 6, 8, 10]$

Print($L1 + L2$) # $[1, 3, 5, 7, 9, 2, 4, 6, 8, 10]$

Print($[4, 5] + [3, 7]$) # $[4, 5, 3, 7]$

3) Replication operator (*):-

Ex

$L = [1, 2, 3]$

Print($L * 3$) # $[1, 2, 3, 1, 2, 3, 1, 2, 3]$

→ One operand is and other operand must be an integer.

Print($3 * L$) # $[1, 2, 3, 1, 2, 3, 1, 2, 3]$

4) Relational operators:-

$=, >, <, <=, >=, !=$

→ Two list must contain similar types of corresponding elements.

Ex:-

$L1 = [2, 4, 6, 8]$

$L2 = [2, 4, 6, 8]$

Print($L1 == L2$) # True
