

index(element):- It returns index of 1st occurrence of an element in a list.

Ex:-

```
Print(L.index(7)) # 2
```

reverse():- It is used to reverse a list.

```
L = [5, 3, 9, 7, 6, 8]
```

```
L.reverse()
```

```
Print(L) # [8, 6, 7, 9, 3, 5]
```

sort():- It is used to arrange the elements in a list in ascending order.

Ex:-

```
L = [5, 2, 7, 10, 9, -3, 4]
```

```
L.sort()
```

```
Print(L) # [-3, 2, 4, 5, 7, 9, 10]
```

Ex:-

```
L = [5, 2, 7, 10, 9, -3, 4]
```

```
L.sort(reverse=True) # Descending
```

```
Print(L) # [10, 9, 7, 5, 4, 2, -3] order
```

Ex:-

```
L = ["MANAS", "BASISTHA", "RAMAKANT", "BARSHA"]
```

```
L.sort() # ["BARSHA", "BASISTHA", "MANAS", "RAMAKANT"]
```

sum(List):- It returns the sum of element in a list.

max(list):- It returns the highest element in a list.

min(list):- It returns the ~~lowest~~ smallest element in a list.
