

Connection Oriented and Connection
less Oriented

In connection oriented protocol acknowledgement is send by the receiver so it is reliable but slow.

Example :- TCP
But in connection less protocol is not send by the receiver so, it is not reliable but fast.

Example :- UDP

Socket

- A socket is like a telephone line between two programs.
- It enables network communication.
- A socket is an end point between two way communication.
- Doing the java programs we can use java.net.*;
- A socket allows java programs to send and receive data between computers like client and server.
