

The application need to locate the remote method.

1. It need to provide the communication with the remote object.
2. The application need to load the class definition for the object.
3. The RMI application have all three features so it is called distributed application.

What are the requirement and how to understand a distributed application system using RMI?

Write the steps to write an RMI program

Step to write RMI program:-

Create the Remote interface.

Provide the implementation of the remote interface.

Compile the implementation class and create the stub and skeleton object using the RMI tool.
