

Date: / /

- Extract data from result set
- requires that you use the appropriate ~~for~~ ResultSet. get() method to ~~extract~~ retrieve the data from the result set.

Close all the environment.

JDBC Drivers
~~~~~

It is used for interacting with the database server which implements the stated interface in the JDBC API.

There are four drivers :-

- Type I → JDBC-ODBC Bridge driver
- Type II → Java Native Code drivers
- Type III → Network Protocol drivers
- Type IV → Database protocol drivers

JDBC-ODBC Bridge driver  
~~~~~

→ ODBC driver is a type I driver installed on every client machine.

→ It can be accessible by the JDBC bridge which supports ODBC accessibility but at present
