

- JDBC call → Middleware server → Database
- Middleware converts request into database protocol

Advantages

- No client side library needs to application server that can perform many tasks like auditing, load balancing and logging, etc.

Disadvantages:-

- Network bandwidth is necessary in the client machine.
- It requires database specific coding the middleware.

Type IV Driver (Database Protocol Driver)

- It is also known as pure java driver.
- This driver communicate directly with the vendors database, through socket information.
