

→ When executing a SELECT Query, it also returns a resultset.

→ Steps :-

Step 1 :- Create a prepared statement with SQL query.

Step 2 :- Set values for parameter (if any) using setInt()

Step 3 :- Execute query with executeQuery()

Step 4 :- Process the resultset.

ResultSet.TYPE_SCROLL_INSENSITIVE
↳ scrollable and reflect change

ResultSet.CONCUR_READ_ONLY
↳ cannot update only read only part.

ResultSet.CONCUR_UPDATABLE
↳ allow update with resultset

ResultSet Type:-

TYPE_FORWARD_ONLY → default
TYPE_SCROLL_INSENSITIVE
↳ scrollable but does
