

TYPE - SCROLL - SENSITIVE

↳ scrollable and reflect changes

Bidirectional Resultset / Scrollable Resultset

Normally, resultset is forward only that means you can only move from top to bottom using `rs.next()`.

But if we want to move both forward and backward, or jump to specific row, we need scrollable resultset.

CONCUR_READ_ONLY =

CONCUR_UPDATABLE → allow to update

Executing Stored Procedure

→ A stored procedure is a precompiled block of SQL code stored in the database.

→ It can contain multiple SQL statement.

(SELECT, INSERT, UPDATE, DELETE)

→ It's faster execution, reusability, security, and reduce
