Callable statement in JDBC

JDBC provides the callable statement interface to call stored procedure from Java.

→ It is a sub interface of prepared statement

Steps to create stored procedure using callable statement

Step 1:- Create the stored procedure in the database.

Step 2:- Register JDBC driver and get connection.

Step 3:- Prepare callable statement using prepare call()

Step 4:- Set input parameter (if any).

Step 5:- Register output parameter (if any)

Step 6:- Execute the callable
