

RTL (Register transfer Language) :-

In Symbolic Notation the RTL is use to describe Micro Operations which are transfer among the register. It is a type of intermediate representation that is very close to assembly language.

It can perform Micro Operation and transfer the result of the same operation to the same or other registers.

It can perform many operation based on :-
1) Micro Operation :-

The operation executed for the data storage in the registers are called as micro operation (particular Method)

2) Register transfer :-

The information transferred from one register to another register is represented in symbolic form by a .
