

DNS lookup:- Your browser asks a DNS server to find out the IP address associated with that URL.

Send HTTP Request:- Once the browser has the website's IP address it sends an HTTP request to the server.

→ The request asks the server for the resources needed to display the page (like text, images and videos).

Server Response:- The server processes your request and sends back an HTTP response. This response contains the requested resources (like HTML, CSS, JavaScript).

Rendering the web page:- Your browser receives the data from the server and displays the webpage on your screen.
