

Features:-
mmmm

Better Performance:- Because it creates a thread for each request not process (like CGI)

Portability:- Because it uses java language and java is robust language.

Robust:- Servlets are managed by JVM so no need to worry about memory leak, garbage collection, etc

Secure:- Because it uses java language and java is a secure language. Java has automatic garbage collection mechanism and a lack of pointers protect the servlets from memory management problems.

Inexpensive:- There are number of free web servers available for personal use or for commercial purpose.

Extensibility:- The Servlet API is designed in such a way that it can be easily
