

What is web server?

A web server is a software that receives client requests (usually HTTP) from web browsers and sends responses, usually in the form of HTML page, images, or other resources.

Types of web server

Apache HTTP server

Microsoft IIS (Internet Information Service)

Apache Tomcat (Servlet container)
Nginx

Function of Web Server:-

Accepts HTTP requests from clients (like Chrome, Edge, etc).

Process requests for static content such as HTML, CSS, JS and images.

For dynamic content, it forwards the request to Web Container, sends back the HTTP response to the client.

Web Container

A web container (also known as Servlet Container) is a part of
