

Supports deployment using web.xml or annotations (@WebServlet)

Apache Tomcat

Apache Tomcat is an open source web server and servlet container developed by the Apache Software Foundation. It implements the Jakarta Servlet, Jakarta JSP, and Jakarta Expression Language (EL) specifications :-

Features of Apache Tomcat

- Lightweight and Fast
- Easy to configure and deploy web apps.
- Supports JSP Servlet and Web Socket APIs.
- Platform-independent (runs on Java).

How Tomcat Works?

Client sends request.
Tomcat receives the request and passes it to the Servlet Container.

The container loads the Servlet, executes it and generates a response.
