

The response (HTML or text) is sent back to the client browser.

```
import java.io.*;
```

// Imports the java I/O package,
// which contains classes for
// input and output operations.
// Here we use it to get the PrintWriter
// class.

```
import javax.servlet.*;
```

// Imports the Jakarta Servlet API
// package. It provides the basic
// interfaces and classes needed to
// create servlets, such as:-

- Servlet
- Servlet Request
- Servlet Response
- Servlet Exception

```
import javax.servlet.annotation.*;
```

→ Imports annotation support for
servlets especially: @WebServlet →
used to map a URL path
(like /hello) to the servlet class.
This allows you to avoid confi-
-guring servlet mappings manually
in web.xml.
