

import jakarta.servlet.http.*;
Imports HTTP specific servlet
classes, such as:-

HttpServlet
HttpServletRequest
HttpServletResponse

These are used when your servlet
handles HTTP requests and responses
(like GET or POST).

@WebServlet("/hello") // This is an
// annotation based mapping-

It tells the servlet container
(like Tomcat).

When a user visits /hello, run
this servlet.

```
public class HelloServlet extends  
    HttpServlet {
```
