

PrintWriter out = response.getWriter();
out.println("<html>");
out.println("<head> <title>Servlet
Generating HTML </title>
</head>");

out.println("<body>");

out.println("<h2> Hello! This is an
HTML output from a Servlet
</h2>");

out.println("</body>");

out.println("</html>");

Collecting client submitted data
→ Servlets collect data from HTML
forms using request methods such
as `getParameter()`. When a user
submits a form, the data is sent
to the Servlet, which processes
it.

Ex:-
PrintWriter out = response.
getWriter();

String name = request.getParameter
("username");

String email = request.getParameter
("email");
